PROFILE SUMMARY

Data Engineer with 1.3 years of experience building reliable, production-grade ELT/ETL pipelines on Azure, Snowflake, and Databricks. Skilled in Python, PySpark, and SQL, with hands-on experience orchestrating workflows using dbt and Apache Airflow. Comfortable across the full pipeline lifecycle — from raw ingestion to clean, analytics-ready datasets — with a strong focus on data modeling, performance tuning, and pipeline reliability. Also, familiar with DevOps tooling (Docker, Jenkins, Git/GitLab) for deploying and managing data infrastructure.

EDUCATION

B.Tech in Computer Science (Specialization in Cloud Computing and DevOps) Aug 2021 – June 2025
University of Petroleum and Energy Studies, Dehradun Grade : A

EXPERIENCE

Data Engineer July 2025 – Present
Nagarro, Gurugram

- Designed and developed scalable data pipelines using Snowflake, Azure Synapse, and SQL, including creating and maintaining database tables, schemas, and data models to support efficient ingestion and transformation of data.
- Implemented dbt-based transformation layers for staging and marts, developing SQL models and data quality checks while managing table-level grants and access permissions across Snowflake and dbt environments.
- Orchestrated and monitored data pipelines using Apache Airflow, while using Git/GitLab for version control, code collaboration, branching, and deployment workflows across development environments.

Cloud and DevOps Intern July 2024 – Aug 2024
Canara HSBC Life Insurance Company, Gurugram

- Built and automated CI/CD pipelines using Jenkins, Docker, and Terraform, integrating shell scripting to streamline deployments and environment setup.
- Managed AWS cloud services (EC2, S3) for infrastructure and storage, improving scalability, reliability, and operational efficiency.

PROJECTS

End-to-End Data Pipeline – Azure Synapse, Snowflake, and dbt [!\[\]\(4b7a79268f6ba26c1471d4232fffa85a_img.jpg\)](#)
Personal Project (2025)

- Built a fully parameterized ingestion pipeline using Azure Synapse to load multiple CSV datasets from ADLS into Snowflake, with dbt models for staging and marts applying data quality tests.
- Designed a data validation framework to bifurcate records into clean and error tables, ensuring 100% data reconciliation and reliable reporting.

Batch ETL Pipeline - PySpark and Azure Databricks [!\[\]\(b4eeff342f60cc7bcd67d869b4fedca2_img.jpg\)](#)
Personal Project (2025)

- Designed and implemented a scalable batch ETL pipeline on Azure Databricks using PySpark, processing 1M+ NYC Taxi Trip records from raw CSV into structured datasets, improving data quality by 30% through type casting and filtering.
- Enhanced query performance by 40% by storing processed outputs in Parquet format on Azure Blob Storage, ensuring cost-efficient storage and fast downstream analytics.

TECHNICAL SKILLS

Languages: Python, Sql, Java

Data Engineering: Snowflake, Dbt, Apache Airflow, PySpark

Cloud and DevOps: Microsoft Azure, AWS, Docker, Jenkins, Terraform, Git/Gitlab

ML/AI: MLOps, Generative AI, RAG, Vector Databases, AI Agents

CERTIFICATIONS

Databricks Certified Generative AI Engineer Associate: [Link](#)

Databricks Certified Data Engineer Associate: [Link](#)

HackerRank SQL Advance Certificate: [Link](#)
