PROFILE SUMMARY

Data Engineer with 1+ years of experience building reliable, production-grade ELT/ETL pipelines on Azure, Snowflake, and Databricks. Skilled in Python, PySpark, and SQL, with hands-on experience orchestrating workflows using dbt and Apache Airflow. Comfortable across the full pipeline lifecycle — from raw ingestion to clean, analytics-ready datasets — with a strong focus on data modeling, performance tuning, and pipeline reliability. Also, familiar with DevOps tooling (Docker, Jenkins, Git/GitLab) for deploying and managing data infrastructure.

EDUCATION

B.Tech in Computer Science (Specialization in Cloud Computing and DevOps) Aug 2021 – June 2025
University of Petroleum and Energy Studies, Dehradun Grade : A

EXPERIENCE

- Data Engineer** July 2025 – Present
Nagarro, Gurugram
- Designed and developed scalable data pipelines using Azure Synapse and Snowflake, enabling efficient ingestion and transformation of large-scale structured data.
 - Implemented dbt-based transformation layers for staging and marts, ensuring modular, testable, and analytics-ready data models with strong data quality checks.
 - Orchestrated end-to-end pipeline scheduling and dependency management using Apache Airflow, reducing manual intervention and improving pipeline reliability across ingestion and transformation stages.
- Cloud and DevOps Intern** July 2024 – Aug 2024
Canara HSBC Life Insurance Company, Gurugram
- Built and automated CI/CD pipelines using Jenkins, Docker, and Terraform, integrating shell scripting to streamline deployments and environment setup.
 - Managed AWS cloud services (EC2, S3) for infrastructure and storage, improving scalability, reliability, and operational efficiency.

PROJECTS

- End-to-End Data Pipeline – Azure Synapse, Snowflake, and dbt** [G](#)
Personal Project (2025)
- Built a fully parameterized ingestion pipeline using Azure Synapse to load multiple CSV datasets from ADLS into Snowflake, with dbt models for staging and marts applying data quality tests.
 - Designed a data validation framework to bifurcate records into clean and error tables, ensuring 100% data reconciliation and reliable reporting.
- Batch ETL Pipeline - PySpark and Azure Databricks** [G](#)
Personal Project (2025)
- Designed and implemented a scalable batch ETL pipeline on Azure Databricks using PySpark, processing 1M+ NYC Taxi Trip records from raw CSV into structured datasets, improving data quality by 30% through type casting and filtering.
 - Enhanced query performance by 40% by storing processed outputs in Parquet format on Azure Blob Storage, ensuring cost-efficient storage and fast downstream analytics.

TECHNICAL SKILLS

Languages: Python, Sql, Java
Data Engineering: Snowflake, Dbt, Apache Airflow, PySpark
Cloud and DevOps: Microsoft Azure, AWS, Docker, Jenkins, Terraform, Git/Gitlab
ML/AI: MLOps, Generative AI, RAG, Vector Databases, AI Agents

CERTIFICATIONS

Databricks Certified Generative AI Engineer Associate: [Link](#)
Databricks Certified Data Engineer Associate: [Link](#)
HackerRank SQL Advance Certificate: [Link](#)
